📍 **Home:** Rruga Dardania, 10000, Prishtinë, Komuna e Prishtinës, 10000 Prishtine, Fushe Kosove (Kosovo)

ABOUT ME

The passion i have for developing new useful things will guarantee my success.

WORK EXPERIENCE

Freelancer

[12/03/2023 – 13/07/2023]

City: Remote

- Make Websites for clients
- Fix clients buggy code
- Make full stack applications for clients

EDUCATION AND TRAINING

Software Engineer

British Gymnasium of Technology [01/09/2022 – Current]

Address: Rruga Mustafa Kruja 6, 10000, Prishtinë, Komuna e Prishtinës, 1000 Fushe Kosove (Kosovo)

Website: <https://www.bgt.school/>

Junior Developer

Shkolla Digjitale [01/09/2017 – 17/08/2020]

City: Prishtina

Country: Kosovo

Website: <https://shkolladigjitale.com/>

DIGITAL SKILLS

Linux (main OS) / Linux (Terminal Commands, Bash/Shell) / Linux / C# / C# .NetCore / .NET Blazor / Data structures & Algorithms / Asp.Net Core (Entity Framework and MS SQL) / Python / Git / HTML / CSS / Bootstrap / JavaScript / Critical Thinking\ / App development\

HONOURS AND AWARDS

Techfest

Engage Technology, Advantage Austria

I am thrilled to have won at TechFest, there were alot of senior developers and alot of developers with more experience than me.

It is an incredible honor to be recognized among such talented contestants, especially considering that I am the youngest participant.

The TechFest is widely renowned in the industry, and this achievement signifies the recognition.

It was definitely a challenge, the problems were hard computer science problems but I've been practicing some leetcode and managed to beat even the Senior Developers. Some of them actually asked me for help which was a great rewarding feeling.

I feel like with this challenge I proved to myself that I am making progress after countless hours spent learning and countless sleepless nights.

Thank you to the TechFest team for the opportunity and stay tuned for other awards because I'm not stopping here.

ICT Albanian Rising Star 16-21y

ICT Awards [21/06/2023]

I am thrilled to have won second place in the prestigious ICT Albanian Awards for my AI project.

It is an incredible honor to be recognized among such talented contestants, especially considering that I am the youngest participant.

The ICT Albanian Awards are widely renowned in the industry, and this achievement signifies the recognition of my dedication and innovation in the field of artificial intelligence.

Next year i expect first place, although I was happy for winning this competition I wasn't satisfied with second place.

I promise to bring the biggest project ICT Awards has seen next year.

I am grateful for this incredible opportunity and excited to continue pushing boundaries and making a positive impact in the world of technology.

Java e Shkences

Don Bosko [28/04/2023]

I won this Competition with our project named: Implementing AI to help our everyday life.

This was a nation wide competition for 15-18yo and we were the youngest contestants

From this award I got several scholarships at different universities for Computer Science and Software Engineering

This is an article that got written about us:

<https://kidsofkosova.net/erdajt-sopjani-me-dy-shoket-e-tij-lum-vokshi-dhe-idriz-mirena-fituan-cmimin-e-pare-ne-garen-java-e-shkences/>

LANGUAGE SKILLS

Mother tongue(s): **Albanian**

Other language(s):

English

LISTENING C2 READING C2 WRITING C2

SPOKEN PRODUCTION C2 SPOKEN INTERACTION C2

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

PROJECTS

Summerizer - AI

[08/07/2023 – Current]

Summerizer is an AI (Artificial Intelligence) that automatically summarizes big articles into a small paragraph.

The model is trained to always contain the most important information and key factors of the article.

With Summerizer AI you can save a lot of time with your daily life.

(I can only host the model for 50 uses a month since I am a student and cannot afford a more expensive plan)

Chekc it out at: <https://summerize-ai.netlify.app/>

ErTerminal

[10/03/2023 – 19/03/2023]

This is an idea that came to me,

To create my own personal CV in a terminal style.

You can find out more about me using terminal commands.

Any Tech Savy user will find this really fun and will be entertained while also finding out more about me.

This project is still in development but a version of it is avaiable for the public.

If you want to check it out or to find out more about me using commands you can go to:

<https://erterminal.onrender.com/>

CybErGuard2.0

[17/07/2023 – Current]

CybErGuard is an ALL IN ONE multifunctional Hacking Tool made in python.

I currently have a production ready prototype but I want to implement more freatures on it.

It currently has:

Network scanning for (open ports, operating systems and vulnerabilities)
Website brute-force (for wordpress websites or any website with an admin panel/login)
Password hash cracking (crack any hashed password using a wordlist)
And a feature Im trying to implement is Wifi Handshake capture.

Im currently working on this and when it comes out you can check it out here:

<https://github.com/ErdajtSopjani/CybErGuard-2.0>

CyberBomber

I just opened my own marketing agency and needed a tool to send emails with.
I couldn't find any tool that can send emails hundreds of times to thousands of emails from a wordlist for free!

So i just decided to make my own, I also made sure its highly customizable so even big companies can use this "tool" and benefit from it!

You can use this tool and check out the source code on:

<https://github.com/ErdajtSopjani/CyberBomber>

ErChat

[22/07/2023]

I made a simple but modern ChatUI to test my development skills with C# and WPF.

It really showed me the level im at for developing desktop apps for windows. I hope to make this project even better and possibly advance it into a real chat app since i have the knowledge and time to do so.

Check out: <https://github.com/ErdajtSopjani/ErChat>

Implementing AI to help our everyday life

[15/04/2023 – 25/04/2023]

This is a project me and two of my friends did for a competition. We made and implemented AI to detect: Cars, Hands and Hand movement, Traffic Signs, Human Body and Body Movements.

Everything here was done in python.

We even made a website for the project to help you understand and to guide you through the setup of it on your own device.

The plan was to further advance this prototype and implement it on Traffic lights. But with no budget what can three 16 year old students really do?

Go here for the prototype:

<https://bgtstudents.github.io/>

ShootThem

This is yet another game i made when the power was out.

So i couldnt play the PvP game alone and decided to make a singleplayer game for my entertainment.

If you want to download and view the source code of this game you can check out:

<https://github.com/ErdajitSopjani/ShootThem>

But if you want to just directly play this game you can check out it's itch.io page:

<https://matzzzz.itch.io/shootthem>

The passion i have for developing new useful things will guarantee my success.
